INFORMATION DISCLOSURE STATEMENT

Sir:

In accordance Applicants' continued duty of disclosure, the documents on the attached Form PTO-1449 are brought to the Examiner's attention. Copies of the non-US patent documents are enclosed.

German Patent No. 690 569 describes a tangential fuel/air injection method intended to create vortices to enhance mixing in a combustion chamber. This is accomplished with mechanical poppet valves opening and closing to support a design frequency.

German Patent DE 198 50 812 A1 describes a method for isolating and confining fueled air from unfueled air through the use of a cross flow air curtain in a combustor tube. The cross flow is accomplished by a narrow circumferential slit in the combustor tube downstream of both the inlet valve and the spark plug. The intent is to localize the combustible mixture in the front end of the combustor tube with a non-mechanical constriction that will effectively disappear and allow high pressure post heated gases to flow freely after the combustion event.

The undersigned hereby certifies that each item of information contained in the information disclosure statement was

first cited in any communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of the information disclosure statement.

The undersigned submits the above-identified references for independent consideration by the Examiner and does not make any admission that these references are or are not material to the present invention or that these references are or are not prior art with respect to the present invention.

No fee is believed to be due as a result of this response. Should the Commissioner determine that a fee is due, he is hereby authorized to charge said fee to Deposit Account No. 02-0184.

Respectfully submitted,

Bradley C. Sammann et al.
